An International Forum in Computer Science . . .

Journal of Parallel and Distributed Computing

Editors-in-Chief: **Kai Hwang**
University of Southern California, Los Angeles

Leonard Uhr
University of Wisconsin, Madison

This international journal is directed to researchers, engineers, educators, managers, programmers, and users of computers who have particular interests in parallel processing and/or distributed computing. The ***Journal of Parallel and Distributed Computing*** publishes original research papers and timely review articles on the theory, design, evaluation, and practices of parallel and/or distributed computing systems.

The journal provides an effective forum for communication among researchers from various scientific fields working in a wide variety of problem areas and sharing a fundamental common interest in improving the ability of computers to solve increasing numbers of difficult and complex problems as quickly and as efficiently as possible.

Research Areas Include

- Theory of parallel/distributed computing
- Innovative computer architectures
- Supercomputers and numerical methods
- Concurrent programming requirements
- Parallel algorithms and implementations
- Language, software, and compiler techniques
- Computer networks and protocols
- Multicomputers and distributed processing
- Artificial intelligence machines
- Applications and performance analysis
- Optical computing and neural networks
- New technologies and future trends

Volume 5 (1988), 6 issues

MECHANICAL SYSTEMS AND SIGNAL PROCESSING

MECHANICAL SYSTEMS AND SIGNAL PROCESSIN

Editor: Simon G. Braun

Technion-Israel Institue of Technology, Haifa, Israel

Mechanical engineers engaged in system engineering as applied to mechanical components an machines are increasingly encountering profound changes brought about by advances i instrumentation and associated computing power. These necessitate the application of techl niques involving diverse aspects of systems theory, signal processing, control theory, an statistics. ***Mechanical Systems and Signal Processing*** is intended to provide a forum fo the discussion of the research findings in these areas, particularly in the field of dynamics in iti broadest sense. The journal stresses applications, with a healthy balance between fundamenta and experimental subjects. ***Mechanical Systems and Signal Processing*** strives to publish refereed papers of the highest quality reflecting the activities and interests of workers in academic and industrial research and development.

Research Areas Include

• Diagnostics and expert systems • Diagnostics and quality control • Environmental testing • Fatigue life prediction • Force identification and dynamic loading • Instrumentation and sensors • Machine and material dynamics • Modal testing • Noise source location and cancellation • Pattern recognition • Signals and systems • Simulation and modelling • Software and hardware aspects of signal processing • Time series and statistics • Vibration monitoring and control •

Recent Contents Include

Dominant error localisation in a finite element model of a mechanical structure, **Q. Zhang and G. Lallement.** • Developments in the use of the Hilbert transform for detecting and quantifying non-linearity associated with frequency response functions, **G.R. Tomlinson.** • Examination of a technique for the early detection of failure in gears by signal processing of the time domain average of the meshing vibration, **P.D. McFadden.** • The digital synchronous filtering technique, **W. Moczulski.** • An adaptive observer for on-line tool wear estimation in turning, Part 1: Theory; Part 2: Results, **K. Danai and A.G. Ulsoy.** • Signal processing for single tooth milling monitoring, **S. Braun, J. Rotberg and E. Lenz.** •

JOURNAL OF COMPLEXITY

Editor

J. F. Traub, *Columbia University, New York City*

The *Journal of Complexity* publishes original research papers that contain substantial mathematical results on complexity as broadly conceived. In the area of computational complexity, the journal focuses on problems that are approximately solved and for which optimal algorithms or lower-bound results are available. The *Journal of Complexity* publishes papers that provide major new algorithms or make important progress on upper bounds, and also addresses such complexity topics as physical limits of computation; chaotic behavior and strange attractors; and complexity in biological, physical, or artificial systems.

Research Areas Include Complexity Results in

- Applied mathematics
- Approximate solution of hard problems
- Approximation theory
- Control theory
- Decision theory
- Design of experiments
- Distributed computation
- Image understanding
- Information theory
- Mathematical economics
- Numerical analysis
- Parallel computation
- Prediction and estimation
- Remote sensing
- Seismology
- Statistics
- Stochastic scheduling
